<i>Preface</i>	xii	
<i>Acknowledgements</i>	xiii	
<i>Notation</i>	xiii	
<b>1</b>	<b>Introducing structures</b>	<b>1</b>
1.1	What is a structure?	2
1.2	Elements of the structural system	3
1.2.1	Loads on structures	3
1.2.2	Supports	5
1.2.3	Members, joints and structural actions	7
1.2.4	Structural materials	13
1.3	Structural systems	14
1.3.1	Pin-jointed frames	15
1.3.2	Moment frames	17
1.3.3	High-rise frames	21
1.3.4	Cable and arch structures	22
1.3.5	Continuum structures	26
1.4	Structural analysis and design	27
1.5	The role of computers in structural analysis	29
1.6	Further reading	29
<b>2</b>	<b>Plane statics</b>	<b>31</b>
2.1	Basic structural principles	32
2.1.1	Forces and displacements	32
2.1.2	Sign convention	32
2.1.3	Equilibrium of forces	33
2.1.4	Free body diagrams	34
2.1.5	The force polygon	35
2.1.6	Statical determinacy	35
2.1.7	The principle of superposition	36
2.1.8	Compatibility of displacements	36
2.2	Determination of reactions	37
2.2.1	Stability and determinacy of reactions	38
2.2.2	Calculation of reactions	40
2.3	Internal forces in structures	45
2.3.1	Sign convention for internal forces	46
2.3.2	Relations between load, shear force and bending moment	49
2.4	Shear force and bending moment diagrams for beams	50
2.4.1	Use of superposition	54

2.4.2	Relating bending moment diagrams to deflected shapes	56
2.4.3	Minimisation of bending moments	58
2.5	Problems	59
<b>3</b>	<b>Statically determinate structures</b>	<b>62</b>
3.1	Plane pin-jointed trusses	63
3.1.1	Stability and determinacy	63
3.1.2	Resolution at joints	66
3.1.3	Method of sections	69
3.1.4	Introduction to matrix methods	71
3.2	Three-dimensional pin-jointed trusses	74
3.2.1	Tension coefficients	75
3.3	Statically determinate moment frames	78
3.3.1	Stability and determinacy	78
3.3.2	Calculation of internal forces	79
3.3.3	Qualitative analysis	85
3.4	Cable and arch structures	87
3.4.1	Suspension cables	87
3.4.2	Parabolic arches	90
3.4.3	Three-pinned arches	91
3.5	Problems	92
<b>4</b>	<b>Stress and strain</b>	<b>97</b>
4.1	Stress	98
4.1.1	Direct stress	98
4.1.2	Shear stress	99
4.2	Strain	101
4.3	One-dimensional elasticity	104
4.3.1	Stress strain relations	104
4.3.2	Statically determinate systems of parallel bars	106
4.3.3	Redundant systems of parallel bars	108
4.3.4	Thermal stresses and strains	109
4.3.5	Strain energy	111
4.4	Two-dimensional elasticity	112
4.4.1	Resolution of plane stresses	112
4.4.2	Mohr's circle for stress	115
4.4.3	Mohr's circle for strain	119
4.4.4	Qualitative analysis of plane stress systems	121
4.4.5	Relations between elastic constants	123
4.4.6	Pressure vessels	125
4.4.7	Plane strain problems	126
4.5	Elementary plasticity	128
4.5.1	Yielding	128
4.5.2	One-dimensional plasticity problems	129
4.6	Further reading	132
4.7	Problems	132
<b>5</b>	<b>Bending of beams</b>	<b>135</b>
5.1	The basics of bending behaviour	136

5.2	Elastic bending stresses	137
5.2.1	Elementary bending theory	137
5.2.2	Bending properties of plane areas	139
5.2.3	Composite beams	145
5.2.4	Strain energy	147
5.3	Elastic deflections	147
5.3.1	Direct integration method for simple beams	147
5.3.2	Analysis of statically indeterminate beams	149
5.3.3	Macaulay's notation for continuous beams	150
5.3.4	Moment-area methods	153
5.3.5	Use of standard solutions	154
5.3.6	Qualitative analysis	157
5.4	Elasto-plastic bending	159
5.4.1	Plastic moment of a section	160
5.4.2	Residual deformations	162
5.4.3	Influence of axial load	164
5.5	Problems	165
<b>6</b>	<b>Torsion and shear</b>	<b>168</b>
6.1	Torsion of circular sections	169
6.1.1	Elastic torque-stress relationships	169
6.1.2	Torsion combined with other loads	173
6.1.3	Yielding in torsion	175
6.2	Torsion of thin-walled non-circular sections	176
6.2.1	Closed sections	176
6.2.2	Thin plates and open sections	179
6.3	Shear stresses in bending	181
6.3.1	Elastic shear stress distributions	181
6.3.2	Application to typical structural sections	184
6.3.3	Unsymmetrical sections and shear centre	187
6.4	Shear deflections	188
6.5	Problems	190
<b>7</b>	<b>Virtual work and influence lines</b>	<b>193</b>
7.1	The principle of virtual work	194
7.2	Application to statically determinate problems	195
7.2.1	Statically determinate reactions	195
7.2.2	Deflections of statically determinate trusses	197
7.3	Forces in redundant trusses	199
7.3.1	Single redundancy	199
7.3.2	Multiple redundancies	201
7.3.3	Temperature effects and lack of fit	203
7.4	Flexural problems	204
7.4.1	The virtual work equation for flexure	204
7.4.2	Analysis of indeterminate beams and frames	206
7.4.3	Curved elements	208
7.5	Betti's reciprocal theorem	209
7.6	Influence lines	210
7.6.1	Determination of influence lines for statically determinate beams	210

7.6.2	Influence lines for redundant beams	213
7.6.3	Applications of influence lines	215
7.7	Further reading	216
7.8	Problems	217
<b>8</b>	<b>Moment distribution</b>	221
8.1	Outline of method	221
8.1.1	Sign convention	223
8.1.2	Fixed-end moments	224
8.1.3	Stiffness, carry-over and distribution factors	225
8.2	Application to statically indeterminate structures	227
8.2.1	Continuous beams	227
8.2.2	Beams with support movements	231
8.2.3	Rigid-jointed frames	233
8.3	Problems	236
<b>9</b>	<b>The stiffness matrix method</b>	239
9.1	The slope-deflection method	240
9.1.1	Deflected shapes of rigid-jointed frames	240
9.1.2	Sign convention and notation	243
9.1.3	The slope-deflection equations	244
9.1.4	Application to indeterminate structures	245
9.2	Stiffness matrices for bars and trusses	249
9.2.1	Sign convention and notation for computer applications	250
9.2.2	Local stiffness matrix for an axially loaded element	251
9.2.3	Global stiffness matrix for a simple two-bar structure	252
9.2.4	Boundary conditions	254
9.2.5	Global stiffness matrices for plane trusses	255
9.3	Stiffness matrices for beams and rigid-jointed frames	258
9.3.1	Local stiffness matrices for 2D and 3D beam elements	259
9.3.2	Global stiffness matrices for plane rigid-jointed frames	261
9.4	Applications and special cases	266
9.4.1	Hand calculations using stiffness matrices	266
9.4.2	Members loaded between the joints	267
9.4.3	Frames with internal pins	269
9.4.4	Grillages	271
9.4.5	Stiffness matrix computer programs	273
9.4.6	Checking stiffness matrix analyses	274
9.5	Further reading	281
9.6	Problems	281
<b>10</b>	<b>The finite element method</b>	286
10.1	Outline of method	287
10.2	A simple plane stress finite element: the constant-strain triangle	288
10.2.1	Shape and displacement functions	288
10.2.2	Element strain and stress matrices	292
10.2.3	Element stiffness matrix	294
10.2.4	Assembly of structure stiffness matrix	296
10.2.5	Elements loaded between the nodes	298

10.3	Other element types	300
10.3.1	Other plane stress triangles	300
10.3.2	Plane stress quadrilaterals	303
10.3.3	Plate bending elements	305
10.3.4	Three-dimensional solid elements	305
10.4	Using finite element computer programs	306
10.4.1	Choice of element type and mesh density	308
10.4.2	Checking finite element analyses	310
10.4.3	A cautionary tale	312
10.5	Further reading	312
10.6	Problems	312
<b>11</b>	<b>Buckling and instability</b>	<b>315</b>
11.1	Stable and unstable equilibria	316
11.2	Buckling of struts	318
11.2.1	Buckling behaviour	318
11.2.2	Euler buckling load for a perfect pin-ended strut	318
11.2.3	Struts with other end conditions	321
11.2.4	Effect of initial imperfections	326
11.2.5	Interaction of buckling and yielding	329
11.2.6	Application to design	332
11.3	Energy methods for struts	334
11.3.1	Potential energy of a buckled strut	334
11.3.2	Rayleigh's method	335
11.4	Lateral-torsional buckling of beams	338
11.5	Other forms of instability	340
11.6	Further reading	340
11.7	Problems	341
<b>12</b>	<b>Plastic analysis of structures</b>	<b>344</b>
12.1	Plastic collapse of structures	345
12.2	The development of a plastic hinge	346
12.3	Plastic analysis of beams	350
12.3.1	Collapse mechanisms	350
12.3.2	Statical method of analysis	353
12.3.3	Virtual work approach	356
12.3.4	Load factor	357
12.3.5	Theorems used in plastic analysis	358
12.3.6	Minimisation problems	360
12.4	Plastic analysis of frames	361
12.4.1	Rectangular portal frames	361
12.4.2	Analysis of more complex structures	364
12.4.3	Combination of mechanisms	367
12.5	Comparison of elastic and plastic design approaches	370
12.6	Further reading	370
12.7	Problems	371
<b>13</b>	<b>Structural dynamics</b>	<b>374</b>
13.1	Single-degree-of-freedom systems	376
13.1.1	Undamped free vibrations	377

13.1.2	Damped free vibrations	379
13.1.3	Forced vibration	383
13.1.4	General dynamic loading	389
13.2	Multi-degree-of-freedom systems	392
13.2.1	Equations of motion	392
13.2.2	Free vibrations of MDOF systems	396
13.2.3	Forced vibration response	399
13.3	Earthquake loading	403
13.4	Further reading	406
13.5	Problems	406
<i>Appendix A: Axis and Sign Convention</i>		410
<i>Appendix B: Glossary</i>		416
<i>Answers to Problems</i>		422
